Education

**Masters, Artificial
Intelligence** *National
University of
Computer and
Emerging Sciences*
09/2021 – 12/2023

**Bachelor's degree,
Software Engineering**
*COMSATS University
Islamabad*
09/2016 – 08/2020

Skills

Research Skills

Algorithms

Python (Programming
Language)

LLMs

Agents

LangChain

Vector DB

GCP

Pytorch, Tensorflow,
Scipy

HuggingFace

Git

Summary

With a strong educational background in Software Engineering and Artificial Intelligence, with hands-on experience in Deep Learning and Machine Learning, I am enthusiastic about the opportunity to contribute my skills and expertise to your dynamic team. Throughout my academic journey and professional experiences, I have cultivated a deep passion for Artificial Intelligence, aiming to stay at the forefront of the rapidly evolving digital landscape.

Experience

AI/ML Engineer *9D Technologies*

09/2023 – Present | Punjab, Pakistan

- Created a Multilingual Agentic RAG Chatbot for Quran and Hadith with chromadb and Gemini 2.5 Flash.
- Created a stable diffusion model that generates unique images from every prompt, and developed a unique web UI, deploying it using FastAPI on a dedicated GPU Server.
- Fine-tuned an Automatic Speech Recognition (ASR) model (Facebook's Wave2vec2 ASR) on Arabic Quran data and deployed it using Python Fast REST API on GCP cloud. Also created a real-time Quran Speech Recognizer using websockets.
- Worked on PDF Chat bots using open Ai API key and technologies like Langchain and vector databases and deployed on GCP.
- Worked on an Agentic Approach for creating a feedback to users using a KIMI Audio and KIMI LLM and the user can also see their own feedback history on their pronunciation in Arabic Quran and Qaida.
- Created a real-time CNN document detector using Computer Vision techniques and integrated using TensorFlow Lite into an Android module to detect document edges.

Junior Software Engineer *AI DNA Micro*

01/2023 – 06/2023 | Irvine, California, United States

- Developed a customized Optical Character Recognition (OCR) model using LayoutLM. Implemented Named Entity Recognition (NER) features for detecting and classifying grocery store receipts data.

Jr AI Engineer *APPTRICK*

01/2022 – 12/2022 | Rawalpindi, Punjab, Pakistan

- Trained and deployed advanced ML models for Plant Detection using YOLOv8, on Fast API on a Local Server and Background Removal on object Categories using COCO Dataset and trained a RMBG-1.4 model and deployed using flask api.

Internee Ai engineer *Code Red Lab*

01/2020 – 12/2020 | Attock, Punjab, Pakistan

- For object detection training, a preprocessed COCO dataset was utilized to develop a basicAI model using the Tiny YOLOv3 architecture.
